DRYline® TSX Structural Sheathing - MATERIAL STORAGE & HANDLING

MANUFACTURER'S RECOMMENDATIONS: Store factory wrapped pallets away from open flame source in a warehouse or in an area where there is drainage that adequately prevents contact with standing water or water run-off.

Maintain the original packaging protection until use to prevent moisture exposure. If storage without protective packaging is necessary, cover the product with a secured waterproof tarp, ensuring the sides are left loose for adequate air circulation.

Avoid storing the product directly on the ground, in standing water, or in any way that could allow wetting of the product before installation. Always take normal precautions to prevent excessive moisture exposure.

Please call 330-528-0684 if you have questions.
